

LE PHUOC VIET

Fullstack Developer

☎ 0764390124 ✉ lephuocviet0402@gmail.com 🔗 lephuocviet.io.vn 📍 My An, Ngu Hanh Son

OBJECTIVE

Full-Stack Developer with hands-on experience in ERP, logistics, and real-time business applications. Passionate about building scalable and maintainable systems using Java, Spring Boot, NestJS, and modern web technologies. Seeking opportunities to grow as a software engineer, contribute to impactful products, and advance toward a Senior Developer role.

EDUCATION

Duy Tan University Aug 2021 - Aug 2025

Major: Information Technology

GPA: 3.72/4

WORK EXPERIENCE

VKNIC - ERP, MES, BIGDATA, AI Otc 2025 - Present

FullStack Developer

Technology: Java, JavaScript, Vue.js, Spring Boot, PostgreSQL

Project: ERP Management System

- **Team Size:** 6
- **Position:** Full-Stack Developer
- **Description:** An ERP system designed to optimize and streamline business processes, including purchasing, sales, inventory, and operational management.
- **Responsibilities:** Developed purchasing and sales modules, integrated ERP APIs with external systems, and implemented full-stack features.

Project: QR Fabric Ordering System

- **Team Size:** 3
- **Position:** Full-Stack Developer
- **Description:** A QR-based fabric ordering platform integrated with an ERP system, enabling customers to place orders and manage transactions efficiently.
- **Responsibilities:** Developed a QR-based ordering platform, integrated ERP APIs, Inicis payment gateway, business verification, and location services.

Project: Server File Interaction System with ERP API Integration

- **Team Size:** 3
- **Position:** Full-Stack Developer
- **Description:** A file management and monitoring system that automatically reads, writes, transfers, and tracks files exchanged between servers and the ERP system.
- **Responsibilities:** Developed file processing and monitoring features, automated file transmission workflows, and integrated APIs for ERP data exchange.

HifivePLUS - Consulting and Building Technology Solutions

Dec 2024 - Sep 2025

FullStack Developer

Technology: TypeScript, Next.js, NestJS, MongoDB

- Project: Hotel Internal Ride Booking System

 - **Team Size:** 7
 - **Position:** Back-End Developer
 - **Description:** Real-time vehicle booking and dispatch system for hotel operations.
 - **Responsibilities:** Developed APIs using NestJS, implemented real-time features with WebSocket, integrated Firebase notifications, and built scheduling services.
- Project: Bao Den Logistics Management System

 - **Team Size:** 12
 - **Position:** Back-End Developer
 - **Description:** Logistics management system supporting order processing and warehouse operations.
 - **Responsibilities:** Developed order and warehouse management modules, built APIs for inventory and order processing, and optimized MongoDB database performance.

Freelance

Jun 2024 - Present

FullStack Developer

Technology: TypeScript, Next.js, NestJS, MongoDB

- Project: PDF Invoice Processing System

 - **Company:** Hoang Long Logistics
 - **Team Size:** 1
 - **Position:** Full-Stack Developer
 - **Description:** Developed a system to automate the conversion of PDF invoices into editable Word documents, helping streamline document processing workflows and improve operational efficiency.
 - **Responsibilities:** Designed and developed the full-stack application, implemented PDF parsing and document conversion features, and optimized processing workflows.

- Project: Corporate Landing Page

 - **Company:** CTM Energy
 - **Team Size:** 1
 - **Position:** Full-Stack Developer
 - **Description:** Developed a corporate landing page to showcase company information, products, and services.
 - **Responsibilities:** Designed and developed the website, implemented responsive user interfaces, and optimized performance and SEO.
 - **Link:** <https://ctmenergy.vn/>

- Project: Data Crawling Tool

 - **Company:** Personal Project
 - **Team Size:** 1
 - **Position:** Full-Stack Developer
 - **Description:** Developed data crawling tools to collect and process information from Google Ads and various online networks for analysis and business insights.
 - **Responsibilities:** Built data extraction and processing modules, developed APIs and management interfaces, and optimized data collection performance and storage.
